diphosphorus pentaoxide, and salted by amines, C12-14- tert-alkyl:

Eye Dam. 1 H318, Specific Concentration Limit (SCL) $>50 - \leq 100\%$;

Eye Irrit. 2 H319, we apply the Bridging principles: the supplier of the raw material - that contains this substance - declares the raw material as Not irritating (measured on rabbit); we use this raw material diluted with other components (diluent) which are not classified as Irritant and which do not affect the hazard classification of the ingredient of interest; so, the mixture shall be classified as Not Irritant, in equivalence with the raw material (Dilution principle).

RESPIRATORY SENSITIZATION:

This product is not classified in this hazard class.

SKIN SENSITIZATION:

The product contains sensitizing substances, but is not classified in this way. Product is not an irritant, but prolonged or repeated contacts may cause irritations or dermatitis.

In a sensitized individual the allergic dermatitis may not appear until after several days or weeks of frequent and prolonged contact. Therefore, even though the skin irritation potential is slight, skin contact should be avoided.

Once sensitization has occurred, exposure of the skin to very small quantities of the material may cause erythema and edema.

Reaction products of 4-methyl-2-pentanol and diphosphorus pentasulfide, propoxylated, esterified with diphosphorus pentaoxide, and salted by amines, C12-14- tert-alkyl: our supplier have tested this substance, and the results of this testing show a Specific Concentration Limits (SCL) of 9.39%; these results are also available in the toxicological studies that are part of the REACH registration dossier.

GERM CELL MUTAGENICITY:

Based on available data, the classification criteria are not met.

CARCINOGENICITY:

Based on available data, the classification criteria are not met.

REPRODUCTIVE TOXICITY:
